Clave Para Wic Reset Utility Gratis

This is an internal reset utility for FT600/FT601 counter management. The utility is designed to make it easy for an end user to reset the Waste Ink Counter for OEM (factory default) and user-supplied values. To reset the Waste Ink Counter, first enable the printer from the Setup menu. Press CTRL+F1 twice (for FT601), or hold the RESET button (for FT600) for about 5 seconds. Epson's own Waste Ink Counters will reset to factory default settings. There are three different counters in an OEM (factory default) Waste Ink Counter. The number printed on the front of the counter is the number printed on the inkskirt of the OEM Nozzle. The number printed on the side is the number printed on the counter face. This Reset key will last for a maximum of 120 consecutive restarts or resets and will only reset the Ink count for the nozzle in service. Once reset, it will need to be reset using the Epson Setup utility to unlock the Wast Ink counter. The DIC Chip Reset Programmer is a small utility that allows you to reset the printer DIC (Digital Ink Control) chip. This DIC chip contains the firmware that provides the functionality for a printer (e.g. the printer controls the laser, affects the resolution or color space, which may override what the host printer requires, and so on). If the DIC chip is unable to read the data from the DIC ROM or it is corrupted, then it can become non-functional and allow only limited functionality. The Reset Programmer for the DIC chip can fix this. About the things : Please install latest Java runtime version (6 and later) with Sun Java web start support to use this utility. Please pay attention to waste counter start by paper feed is in seconds waste counter initialization sometimes takes more than 10 minutes (printer driver refresh during initialization of MFC) If printer model support WIC reset utility, please send Your printer model info and serial number that You purchased for WIC reset to info@wyw.cz at least 3 days before you want to buy reset key.
